DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 11, 2008 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 17, 38-41, 56-65 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 17 recites "nonreactive with but interactive to the pigmented composition". The phrase renders the claim vague and indefinite because the meaning of the phrase is unclear. It is not clear how a same wetting agent can be nonreactive with but at the same time interactive to the pigmented composition.

The remaining claims are rejected as they depend on the base claim.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 17, 38-41, 56-65 are rejected under 35 U.S.C. 102(b) as being anticipated by Drechsler et al. (US 6074654) as evidenced by STN Registry.

Claim 17 recites "[a] lip cosmetic comprising an anhydrous pigmented transfer resistant, film forming, cross-linked resinous silicone, composition for use in combination with a non reactive wetting agent having affinity to, the composition, said wetting agent being a liquid polymeric hydrocarbon having a number average molecular weight greater than 650 devoid of non-volatile silicone oils, and wherein the wetting agent overcoat composition flows smoothly over the composition". In this case, the claimed subject matter is a cosmetic composition comprising an anhydrous pigmented transfer resistant, film forming, cross-linked resinous silicone. The recitation "for use in combination with a non reactive wetting agent" and onward denotes the intended use and purpose of the cosmetic containing the cross-linked resinous silicone and does not further define the silicone composition. Claims 38-41 and 56-59 are directed to the wetting agent overcoat composition of the preamble which recites for how the transfer-resistant silicone composition is used, and do not add any limitation to the claimed subject matter. Thus no patentable weight is given to these claims. The newly added limitation, that the wetting agent is an alpha olefin copolymer and "nonreactive with but interactive to the pigmented composition" modifies the wetting agent with which the lip cosmetic is used, and does not limit the claimed lip cosmetic itself.

Drechsler discloses a lip color film-forming composition comprising crosslinked organosiloxane resins such as Wacker 803 from Wacker Silicones Corp. (trimethylsiloxysilicate) and pigments in a volatile carrier. See col. 7, line 46 - col. 9, line

Art Unit: 1617

2. The reference also discloses a method of enhancing the gloss, shine, and feel of lip composition by apply a complimentary product, known as "overcoat" or "topcoat", over the film formed after application of a transfer-resistant lip composition. See col. 10, line 63 - col. 16, line 7. The reference also teaches in col. 2, lines 7-13 that it is well known in the art to formulate a transfer-resistant cosmetic composition with trimethylated silica and volatile solvent. The reference teaches using the film forming silicone resin in the amount ranging from 10 to 95 %. See instant claims 63 and 64. Example 7 also contains 10 % of Bentone Gel VS-5PC, which contains quaternium-19 hectorite. See STN-Registry. See instant claims 60-62, 65.

Response to Arguments

Applicant's arguments filed on June 11, 2008 have been fully considered but they are not persuasive.

Applicant asserts that the prior art overcoat composition fails to teach alpha olefins of the present claims. However, as discussed above in the rejection, the claimed invention is "a lip cosmetic comprising an anhydrous pigmented transfer resistant, film forming, cross-linked resinous silicone", and the wetting agent and the described properties of the wetting agent are not part of the claim limitations.

Conclusion

No claims are allowed.
